ROULETTE

In the game of Roulette, there is a layout with 38 single numbers (1 thru 36, 0 and 00) which correspond to a Roulette Wheel having identical numbers as the layout. In Roulette you can place 11 types of wagers, each one having different payouts. As a general rule, your wager is reflected by where you place your chip and what it touches on the layout. Use the Pay Schedule as your guide.

THE PLAY OF THE GAME

The Dealer spins the Roulette Wheel in one direction and a small ball in the opposite direction. Bets may be placed until the Dealer announces "No More Bets." When the ball comes to rest in one of the pockets of the Roulette Wheel, the Dealer will announce the winning number and Place a marker on the winning number.

First the table is cleared of losing wagers and then all the winners are paid. Please do not remove winning wagers or place new bets until all winners have been paid and the Dealer announces "Place Your Bets."

In order to keep each player's wagers separate from the others, the dealer assigns a color chip unique to each player.

You determine the value of your color chips when purchasing stack(s) of chips. There are 20 chips per stack, and the value of a color is indicated by a numerical button placed on your color (20 indicates \$20 per stack). Your "color" chips are redeemed before you leave that particular Roulette table.
